REMEMBER (If you want flowers in your house this winter, or in your garden next spring,) YOU MUST PLANT BULBS THIS FALL!

Autumn, 1911

Beautiful Flowers

From BULBS, WINTER and ROOTS and SEEDS for SPRING

"Daffodils and Tulips, Sweet Lilies and Fragrant Hyacinths that blaze through the frosty window panes and make the garden gay with the breath of Spring."

Those who Appreciate Gardens and Love Flowers lose no opportunity to bring them into bloom indoors or in the garden. For this nothing is so useful as flowering bulbs. For winter house planting they grow rapidly and are sure bloomers, and planted in the garden will flower two months before any others. The great effectiveness of the bright, sweet bulbous flowers and decorative plants we illustrate this Fall, lies in the charming contrast they make in the living rooms against the dreariness of outdoor nature and Winter's severe cold. For this reason, fortunately, these curious, interesting and easily grown flowers should be planted EARLY to beautify the home circle at the Christmas holidays, an occasion when they may be most appreciated. Easter furnishes another occasion when they are indispensable.

TIME OF PLANTING.—To the beginner we would particularly emphasize the fact that NOW and not SPRING-TIME is the time to plant all kinds of spring flowering bulbs. The larger part of the bulbs offered in this Catalogue reach us from Holland early in September, and the sooner they are planted after that the greater will be the measure of success; therefore ORDER EARLY.

PLEASE READ CAREFULLY

wise it will be deducted.

BULBS BY EXPRESS.—All bulbs herein quoted will be sent, prepaid, to any express office in Canada (if not mailable), when ordered at the printed prices, except where noted.

ORDERS.—All orders are filled in rotation as received. We would advise early orders to ensure their being filled complete, as later in the season some varieties become exhausted, when we must reserve the privilege of supplying another sort as near the color as possible, but shall always substitute an equal if not better variety than ordered.

REMITTANCE.—All orders must be accompanied with the cash for full amount of order, which may be sent by Registered Letter, P.O. Order, Postal Note or Express Order.

ADDRESSES.—Please be careful and write your Name, Post Office and Province plainly, that there may be no disappointment by orders being incorrectly sent.

Awaiting your esteemed orders, which will receive our most careful and prompt attention, we remain, yours very truly,

WHEN SHIPMENTS CAN BE MADE.—The general line of bulbs will be ready for shipment in September. A few kinds (chiefly Roots and Lilies) are not ready for shipment before November, as they are not matured enough to take up before that time. Therefore please note that all general orders will be shipped as soon as received in September, and the balance will be forwarded as early in November as possible.

BULBS BY MAIL.—All bulbs herein quoted will be sent to any Post Office in Canada, prepaid, when ordered at printed prices, except where noted. Postage to Newfoundland—15 cents per lb., or fraction thereof, must accompany all orders, otherwise it will be deducted.

Depths at which Bulbs Should be Planted.

Many of our customers are frequently puzzled to know the proper depth and distance apart at which bulbs should be planted. The accompanying diagram conveys the information much more clearly and briefly than we could describe it. The chart will bear careful study. Outdoor planting should be done early in the fall to secure the healthy plants, vigorous foliage and beautiful flowers.

OUR SPRING CATALOGUE FOR 1912

Will be ready in January, and will contain, in addition to a very complete list of all the best standard Flower and Vegetable Seeds, Garden Tools, Farm Seeds, Fertilizers, etc., a number of the choicest novelties selected by us the past season. A copy will be sent WITHOUT APPLICATION to all our regular customers as soon as issued. We shall be pleased to mail one to your friends who purchase seeds and plants by mail, and whom you believe would be interested in our catalogue.

Early Roman Hyacinths

This is a valuable and beautiful variety; the flowers, while smaller than the ordinary Dutch Hyacinths, are produced in much greater profusion, each bulb producing several very graceful spikes of bloom, and their nearly whiteness, delicious perfume, earliness and profusion of bloom, has made this variety exceedingly popular. They are so easily grown and so early, that if potted in September and October they can be brought into flower in December, and by a succession of plantings can be had in bloom throughout the winter. Roman Hyacinths are not hardy enough for open ground culture. (See cut).

MINIATURE HYACINTHS

Also called
"DUTCH ROMANS"

8—These little Hyacinths are excellent for growing in pots, pans or boxes; they bloom very freely; often producing 3 or 4 spikes. They are equally desirable for culture out-doors; they should be planted closer together than the "Dutch Hyacinths." Culture is the same as recommended for the Roman Hyacinths, and they come into bloom after the Roman Hyacinths are exhausted. The flowers are pink, white, and light blue in various shades. 5c. each; 40c. doz.; per 100, \$2.50.

A bed of Hyacinths as produced from our choice Double Mixed Bulbs

Single Early Tulips

Please bear in mind that all the Bulbs offered below are **STRICTLY FIRST SIZE**, and such as are used by Florists. They should not be confounded with second and third size Bulbs offered at low prices, and which seldom give satisfaction.

For beauty of form and brilliancy of color nothing can equal the gorgeous effect of Tulips. They are perfectly hardy and of the easiest culture. They form great ornaments of the garden as well as the greenhouse. Grown in pots they are very gay and fine, and for bedding in mixture or separate colors, no spring flower equals their brilliancy and effect.

The characters a, b, and c, indicate the proportional earliness of the varieties; if planted outdoors, a and b may be used together for bedding purposes, but those marked c are later. The numbers following these letters indicate the growth in inches.

Bed of Single Tulips

DOUBLE EARLY TULIPS

Double Tulips have massive flowers of brilliant and varied color shades and markings, and being double, the flowers last much longer in bloom than single varieties, and in consequence, when singles and doubles are planted in conjunction the "time of the Tulips" is greatly prolonged. Double Tulips are beautifully adapted for beds on the lawn, in the garden, and for mingling in clumps of half a dozen or more around the edges of shrubbery. They are robust growers and exceedingly effective. The early sorts (those indicated by an a or b) do splendidly when grown in pots for winter forcing, but must be forced much slower than Single Early Tulips by keeping them cooler. The letters preceding the varieties indicate their earliness; those marked "a" flower together and are the earliest; those marked "b" follow, etc. The figures indicate the average height in inches.

LATE, OR MAY FLOWERING TULIPS

The most beautiful section of the Tulip family, increasing in popular favor every year, and deservedly so, not only on account of their length of stem, size of flower and lasting quality, but also from the fact that blooming as they do, in the latter part of May, they lengthen the season of bloom of the regular early flowering varieties and should be planted by everyone who wishes to get bulbs and plants that will fill in the season from the beginning of April until the latter part of May, when other hardy perennials are starting to bloom.

A very decorative new class of Nosegay Daffodils or Polyanthus Narcissi, growing taller than the old varieties with a less stiff habit and a looser head of flowers, which are larger and more elegantly formed. They also have the merit of being hardy, and may be naturalized like the True Daffodil. Besides being good border plants they are valuable for culture in Pots and Jardinieres and will bear gentle forcing. The flowers of these new Narcissi are all delightfully fragrant and will be found of great value for vases or bouquets.

The *Polyanthus* varieties of Narcissus are not only beautiful but deliciously sweet-scented and of the easiest culture; very free flowering and suitable for window, garden or conservatory, continuing long in bloom. They bear tall spikes of bloom bearing from six to twenty-four flowers each. The pure white petals and gold cup of some varieties, the yellow and deep orange of others, and the self white and yellows, render them great varieties.

Japanese Lillium Longiflorum Giganteum

LILIES

The true Bermuda Easter Lily (Lilium Harrissi)

This magnificent Lily is undoubtedly the best for winter forcing, as it comes quickly into blossom and produces flowers in the greatest abundance. The flowers are trumpet-shaped, pure white, gracefully formed and delightfully fragrant. The bulbs should be potted in early fall, in rich soil, and the pots plunged in sand, where they should be allowed to remain until the approach of cold weather. It can be forced into bloom at any desired time, and the freedom with which the flowers are produced is truly remarkable; even the smallest bulbs will bloom.

Chinese Pæony

DOUBLE CHINESE PÆONIES

These great big-hearted flowers of June are coming again to be as much liked as they were by our grandfathers. They grow from 1 to 3 feet high, producing the most magnificent blooms, which sometimes almost surpass the beauty of the rose. Another point which is largely in their favor, is the fact that the plants are never attacked by either insects, animal or fungus disease. Pæonies will succeed in almost any kind of soil, but give best results when planted in a deep, rich and somewhat moist loam.

October and November Planting will give you blooms the following Spring. Once planted they will last a lifetime with little care.

CRIMSON OR SCARLET CLOVER

(Trifolium Incarnatum)

May be sown from June to September, and then will make excellent pasture in the fall, the open winter and the spring. It is the earliest cropper of all clovers, and can be cut for hay in May. Sown in spring it will produce good pasture, but will not go to seed. Price, per lb. 15c, postpaid 20c. By express, 10 lbs \$1.40. Per bushel price on application.

RYE

Winter or Fall—The variety most commonly cultivated. Whether sown for grain, straw, or cutting green. Per bush, \$1.20, peck 35c.

SAND OR WINTER VETCH

(Vicia Villosa)

It succeeds and produces good crops on poor sandy soil as well as on good land; grows to a height of four or five feet. It should be sown in spring, mixed with oats, spring rye or barley; or during August and September, with winter rye, which serves as a support to the plants. It is the earliest crop for cutting being hardier and nearly a month earlier than Scarlet Clover, and a full crop can be taken off the land in time for planting spring crops. Every dairyman and stock breeder should have a field of it, and if you try it once you will never be a season without it. It is exceedingly nutritious, eaten with relish, and may be fed with safety to all kinds of stock. Sow 50 to 60 lbs. per acre, with one half-bushel of rye, oats or barley. Per lb. 25c. 3 lbs. 65c. postpaid; 10 lbs. \$1.40, 25 lbs. \$3.00, 100 lbs. \$11.00.

WILD RICE SEED

DIRECTION FOR SOWING—Put the rice in coarse cotton or linen bags, and sink them in water for 24 hours. Sow in water which is from 6 inches to 5 feet deep, in soft mud bottom, and in places where there are but few weeds. It is useless sowing these seeds except in a mud bottom, or on low, marshy places which are covered with water the year round. In running water sow as much out of the current as possible.

Wild Rice (*Zizania Aquatica*)—Per lb. 25c, by mail 30c; 10 lbs. or over 20c per lb., carriage extra.

STANDARD CYPHERS INCUBATORS AND BROODERS**Look for the Trade Mark and Label.**

The Incubators and brooders we are offering this season are the **Standard Cyphers Incubators and Brooders**, acknowledged by the largest and most successful poultrymen to be the **best in the world**. Being made from the best quality Michigan white pine, they are not only lighter, but more durable, resisting heat and moisture better than if made from ordinary incubator wood. Some of the important features of the Cyphers Incubators are:—

They are absolutely fire-proof and insurable. They require no added moisture in any form.

The heat is automatically regulated, hence the only care necessary is in supplying the oil and turning the eggs. They have been shown by actual test to give a larger percentage of hatches, and to produce larger and stronger chicks than any other incubator on the market.

SIMMERS' "TORONTO PARKS" LAWN GRASS SEED

(For Croquet, Lawn Tennis and Cricket Grounds)

OUR OWN MIXTURE OF PERENNIAL GRASSES

Prepared for use in the Toronto Parks, named by us and sold at our stores for many years with very general satisfaction. It will produce an even dense growth of permanent sward as early in the season as it is possible to do. This mixture contains no annual grasses for making quick show to the detriment of a good lawn, but only those of lasting value and hardiness, which, when once established, need no reseeded for years.

Our seed, which we know to be as pure as can be found anywhere, is of the best varieties, best suited for even and permanent growth; it is carefully cleaned, and as free as it is possible to make them from foreign matter. The quantity of seed required for an acre is variously estimated at from 40 to 60 lbs., or for renovating old lawns half these quantities may be used.
